Three participation configurations

An overview for an initial discussion. Archival parameters are not a current offer; conflicting values and venue-specific requirements need confirmation.

F.01

MindShow installation

The main stand configuration uses successive individual sessions. Other visitors can observe; stage and VJ versions are scoped separately.

Space [Archive]. The archival rider specifies an area from 6 m². Actual layout and queueing are agreed with the venue.

Session duration [To confirm]. Sources differ: 7 ± 2 minutes in MindShow and around 1.5 minutes in the events overview. The current mode needs clarification.

Visitor flow [Archive]. The events overview gives 15-20 people per hour. This is an archival configuration estimate, not a promise for every venue.

Operation [Per brief]. Operator shifts, hygiene breaks, long-running operation and result delivery are agreed in the brief.

F.02

Paradox of Success game

One game station has two simultaneous participants. Individual duels or a tournament sequence are possible; the audience is counted separately.

Participants [Archive]. Two players per station; audience size depends on the venue.

Game round [Archive]. The archival specification gives 90 seconds. Briefing and participant changeover require additional time.

Throughput [Archive]. The archival reference is 5-8 pairs per 30 minutes at one station, including the facilitation cycle.

Space [Archive]. The overview specifies an area from 9 m²; layout and audience flow need confirmation.

F.03

Talk or workshop

A talk supports observation from the audience and voluntary participation in a demonstration. A workshop includes discussion and participant work; group size does not mean that everyone is measured simultaneously.

Talk [To confirm]. Sources give 30-90 and 45-90 minutes. The lower bound depends on the version; duration is agreed for the programme.

Workshop [Archive]. The archival description gives 1.5-3 hours and a group of 10-30 people. This is a separate configuration, not a talk duration.

Setup [Archive]. The archival talk rider gives around 30 minutes. Setup and access to the venue need confirmation.

Laboratory / series [Per brief]. Programme, audience age, number of sessions, equipment and outcomes are scoped separately. A proposed programme is not described as already delivered.

Team and infrastructure

Measured participants, audience size and throughput are different parameters. Staffing, shifts and long-running operation are fixed in the proposal; a specific team size has not yet been defined.

ODA.dream

- Artistic method, neural interfaces, laptop and authored software as scoped
- Configuration of its own system, operators and facilitation as proposed
- Documentation and agreed rider

VENUE / ORGANISER

- Space, screen/projector, AV, power and furniture as required by the rider
- Local production, access, accommodation and visitor flow
- Agreed team and infrastructure operating conditions

CONFIGURATION REQUIREMENTS

MindShow installation. Screen/TV and HDMI; the archival rider specifies 65” or larger; Table, chair, power and agreed area; Sound and queue coordination as scoped.

Paradox of Success game. Screen or projector, HDMI and agreed sound; Table, two chairs, power and game area; Audience-flow coordination.

Talk or workshop. Screen/projector, HDMI and power; Microphones and sound for the stage configuration; Furniture, group accommodation and setup access.

FOR AN INITIAL INQUIRY

- Question, format or artistic concept
- Dates, city, space and venue plan
- Audience, participation and expected flow
- Team, infrastructure and operating duration
- Budget framework, required documents and recording permissions
